

Please join us on June 8th to explore the first ocean crossing of an unmanned, underwater robot and what it means for the future of ocean observations, predictions and climate change, as well as its applications for marine spatial planning and ecosystem-based management.

Speaker **Scott Glenn** is a world-renowned oceanographer, researcher and professor at Rutgers University, NJ - a key member of the Mid-Atlantic region of IOOS. The glider's mission represents the culmination of Glenn's 30-year career as a pioneer in oceanographic observation. Glenn is now narrating a documentary highlighting the Atlantic Crossing story and is looking forward to the glider's debut at the Smithsonian later this year.
